

Quick Start Guide for Legal Kiosk Accessibility Features

Introduction

For users who cannot operate a physical keyboard or mouse, start by using Voicebot to open the necessary programs listed below, and then use other accessibility tools as needed. In the "More Accessibility Applications" section, we offer additional software like NVDA and Magnifier, which require the use of a physical keyboard or mouse.

Additional Support

For more help with these tools, please click on the "Accessibility Support" icon on the Kiosk desktop. There, you'll find a complete list of shortcuts, commands, and detailed guides.

Using Voicebot to Access Applications

1. Activate Voicebot: Simply speak to initiate commands. Start with the prefix "Voice" followed by your command.
2. Open Camera Mouse: Say "Voice Camera Mouse".
3. Launch Dynamic Keyboard: Say "Voice Keyboard".

Navigating the Kiosk with Camera Mouse

1. Once activated via Voicebot, use the camera to track a feature of your face.
2. Move your head to control the cursor and move about the screen.
3. Clicking is performed holding the cursor steady in one spot until it triggers a click.

Typing with Dynamic Keyboard

1. After launching with Voicebot, use Camera Mouse to click on the Dynamic Keyboard icon. Two arrows will appear at the top corners of the screen.
2. Before you start typing, click in a text input area.
 - a. For example: In Microsoft Word, click inside the document, or in a browser, click in the address bar.
3. Click the top left arrow to activate the keyboard or click the top right arrow if you need to switch between open applications.
4. As you move the cursor over the keyboard, hold it steady on a key to select and type.

More Accessibility Applications
